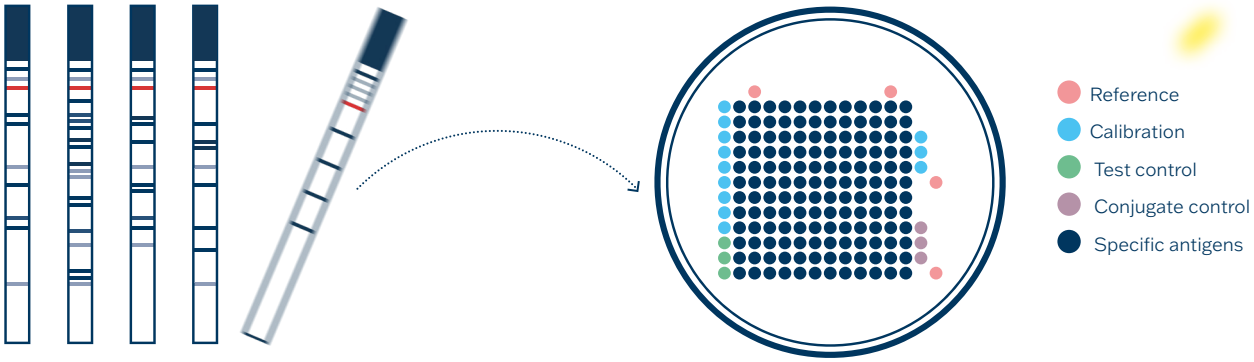
Multiplex diagnostics

Microblot-Array is an immunoblot array in the well of a microtiter plate format designed for efficient multiplex diagnostics. It brings ELISA's high throughput to BLOT testing. The comprehensive evaluation is ensured by using the TestLine Analytics Software in combination with the Microblot-Array Reader, enabling complex image analysis, including results evaluation and connectivity to LIS.

So much to discover – in a single well.

Up to 5 BLOT tests **in 1 ELISA-like well**



Innovation is part of our portfolio.

Panel	Parameters included	Expected availability
Atypical respirations	Mycoplasma pneumoniae, Bordetella, Chlamydia pneumoniae, Legionella pneumophila	In development
Gastrointestinal diseases	Helicobacter pylori, Yersinia enterocolitica, Autoimmune gastrointestinal diseases	In development
Autoimmune neurological diseases	Paraneoplastic syndrome, Limbic encephalitis	In development
Herpetic infections	EBV, CMV, HSV, VZV, HHV-6	In development

4 steps, countless options.

1

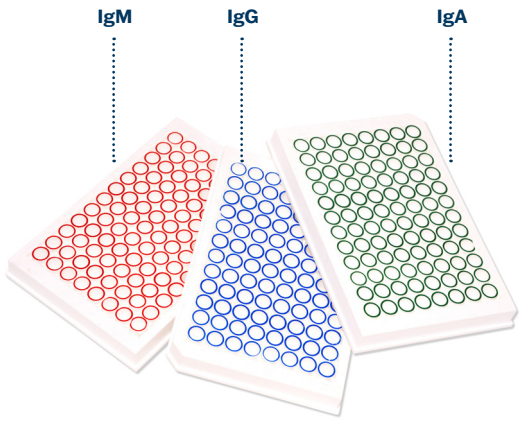
Unbox

Ready to use kit,
no dilution needed

2

Compose

Up to 96 various tests in one plate
thanks to breakable wells



3

Process

Automated or manual processing
with standard ELISA routine

4

Evaluate

Comprehensive evaluation with
dedicated MBA Reader and Software
