

# **EIA Coxsackie IgM**

EAN Code: 8595635312083 Catalog number: CoXM96

Package size: 96 Storage: 2-8 °C

**Producer:** TestLine Clinical Diagnostics s.r.o.

## **Description:**

- Microtitre wells are coated with recombinant Coxsackievirus B1-B5 antigen.
- If specific antibodies are present, they bind to the antigen, are labeled by the Conjugate in the following steps and are detected by color reaction with a single component substrate (TMB-Complete).
- The kit allows 96 tests, including controls in a split microtiter plate with color-coded strips and breakable wells.

### Advantages:

- Kit includes CUT-OFF, Positive Control, Negative Control and Calibrators (5, 20, 80, 320 U/ml).
- Single-component substrate.
- Ready-to-use, color-coded components.
- Interchangeable components with the exception of kit specific components (Controls, Conjugate, Plate).
- The total assay time is about 1,5 hours.
- Semi-quantitative evaluation in the Index of Positivity (IP) or quantitative evaluation in U/ml.
- High sensitivity and specificity of the test.

#### **Application:**

- Screening test for the detection of specific IgG antibodies in human serum or plasma.
- Differential detection of Enteroviruses in the sample.

## **Brief assay procedure:**

Exportováno 5. 12. 2025 Stránka 1 / 2

- 1. Dilute samples (1:101).
- 2. Pipette Controls and diluted Samples.
- 3. Incubate at 37°C for 30 min.
- 4. Aspirate and wash the wells 5×
- 5. Pipette Conjugate.
- 6. Incubate at 37°C for 15 min.
- 7. Aspirate and wash the wells 5×
- 8. Pipette Substrate (TMB-Complete).
- 9. Incubate at 37°C for 15 min.
- 10. Pipette Stop Solution.
- 11. Read color intensity at 450 nm.
- 12. Evaluate the test.
